Tell us what your idea is.

Being Blind should not be felt like a curse to humans. Using Machine Learning we can make great tools to help people with disabilities so that their life could become little easy.
This app will help the blind people to hear the written text just by clicking image of it.

Tell us how you plan on bringing it to life.

My project is in alpha stage right now. I have created a sample prototype of the application which extracts the text from the image and convert them into String format. I will use ML Kit in my application so that users can use the application without the internet, anytime and anywhere.

How Google can help me:

1. Assign me a Mentor for the project.
2. Help us reach a wide audience.
3. Free subscription of Google Cloud platform.

Tell us about you.

I am Sumit Paul, I am a Student in the field of computer science and engineering, I have created some Actions on Google and created 2 Android applications.
My portfolio which expands my projects is available at: https://sumitpaul.co
